

My Air Rifle Settings

Date	Manufacturer & Modell	Serial Number	Weight
			max. 5,5kg (ISSF)

Sights

Notes (Manufacturer/Modell, Accessories, Weights...)

Setting	Measurement / Note	ISSF			
Position Rear Sight			☐	☐	☐
Position Front Sight Tunnel			☐	☐	☐
Height Sight Elevation		80mm ring center to barrel center	☐	☐	☐
Lateral Offset			☐	☐	☐
Front Sight Rings (Size & Width)			☐	☐	☐

Fore-end / Handrest

Notes (Manufacturer/Modell, Accessories, Weights...)

Setting	Measurement / Note	ISSF			
Position			☐	☐	☐
Height		140mm lowest point to barrel center	☐	☐	☐
Tilt			☐	☐	☐
Rotation			☐	☐	☐

 = marked on the part |  = photo taken |  = changed & noted

Buttstock

Notes (Manufacturer/Modell, Accessories, Weights...)	

Setting	Measurement / Note			
Offset		☐	☐	☐

Cheek Piece

Notes (Manufacturer/Modell, Accessories, Weights...)	

Setting	Measurement / Note	ISSF			
Height			☐	☐	☐
Longitudinal Position			☐	☐	☐
Lateral Offset		40mm right or left from barrel center-line	☐	☐	☐
Tilt / Rotation			☐	☐	☐

Grip

Notes (Manufacturer/Modell, Accessories, Weights...)	

Setting	Measurement / Note	ISSF			
Position			☐	☐	☐
Vertical Position		160mm lowest point to barrel center	☐	☐	☐
Lateral Offset		60mm right or left from barrel center-line	☐	☐	☐
Tilt / Rotation			☐	☐	☐
Trigger (Weight, Position,...)			☐	☐	☐

 = marked on the part |  = photo taken |  = changed & noted

Buttplate

Notes (Manufacturer/Modell, Accessories, Weights...)

Setting	Measurement / Note	ISSF			
Buttstock Length			☐	☐	☐
Tilt			☐	☐	☐
Lateral Offset		30mm right or left from buttstock center	☐	☐	☐
Height (Position)			☐	☐	☐
Length of Buttplate Heel to toe length		153mm	☐	☐	☐
Depth of Curve		20mm	☐	☐	☐
Distance between Wings			☐	☐	☐
Upper Wing			☐	☐	☐
Center Section			☐	☐	☐
Lower Wing			☐	☐	☐

 = marked on the part |  = photo taken |  = changed & noted

Appendix: Changes

Date	Setting / Piece	New Measurement / Note	
			☐
Space for Notes			
			☐
Space for Notes

 = changed again

Instructions

Use this worksheet to record all your current rifle settings in one session—ideally at the start of the season.

That way you have a clear baseline you can refer back to throughout the season.

If you change anything during the season, mark the change on the worksheet with the symbol  and also record the new setting on the supplementary sheet “Changes”.

At the start of the next season, use a fresh sheet and enter your current settings there again.

An air rifle offers a huge number of possible adjustments. I tried to cover as many as possible in this worksheet, but there will always be details that differ by model or accessory. That’s what the **note fields** are for.

Read the terms in this instruction section carefully so you know exactly which setting each label refers to.

The fields  and  are little reminders:

-  – Take a photo of the setting.
-  – Mark the setting directly on the rifle with a pen (if possible). Not every part/setting can be marked.

Because every model and accessory can have different marks or scales, you can enter in the “**Measurement / Note**” field whichever value makes most sense for you — either the number from the manufacturer’s mark or your own measurement (e.g. with a tape measure).

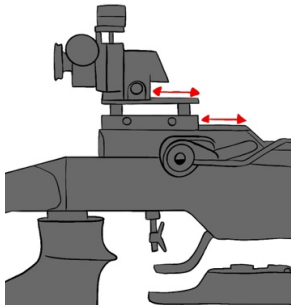

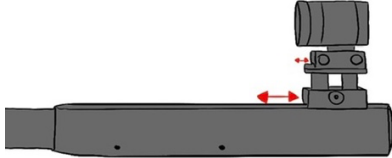

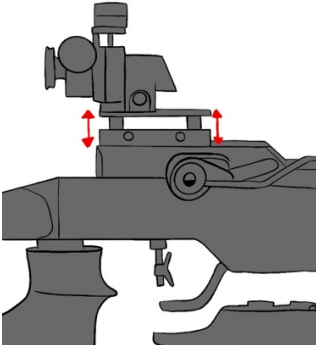

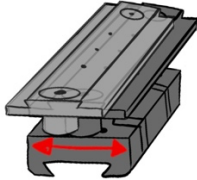

If it’s not obvious where to measure from, write that down as well. For example:

- For **fore-end height** — are you measuring from the rail or from the stock?
- For **sight position** — are you using the front edge or the rear edge of the rear sight?

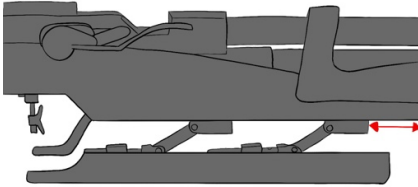

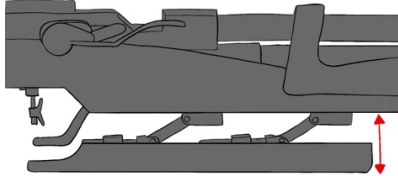

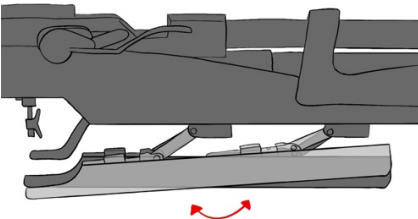

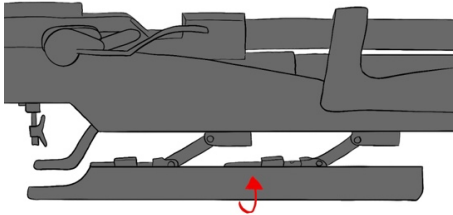

The more precisely you document these reference points, the easier it will be to restore your settings later.

Sights

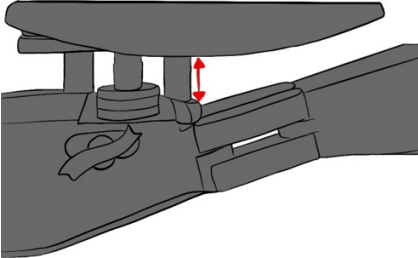

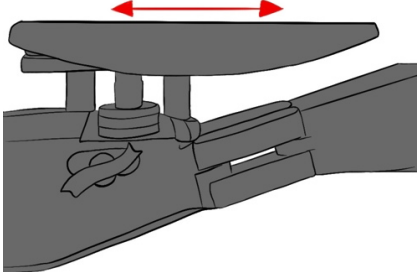

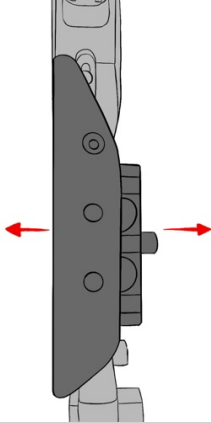

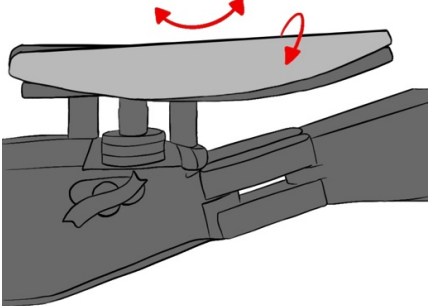

Position Rear Sight	Positon Front Sight Tunnel
	
Height Sight Elevation	Lateral Offset
	

Fore-end / Handrest

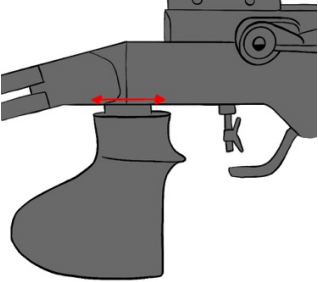

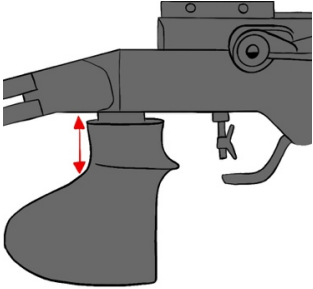

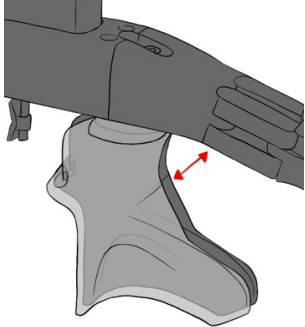

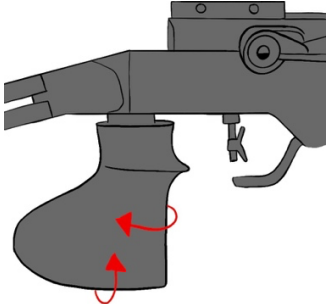

Position	Height
	
Tilt	Rotation
	

Cheek Piece

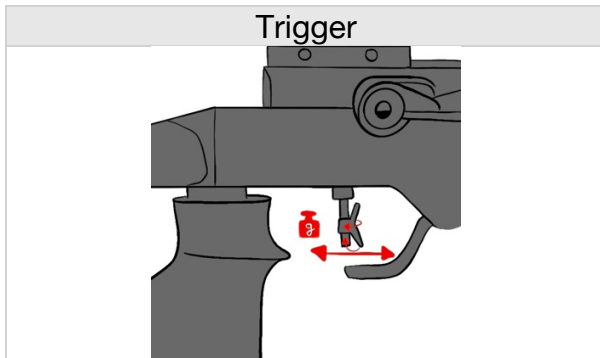

Height	Longitudinal Position
	
Lateral Offset	Tilt / Rotation
	

Grip

Position	Vertical Position
	
Lateral Offset	Tilt / Rotation
	

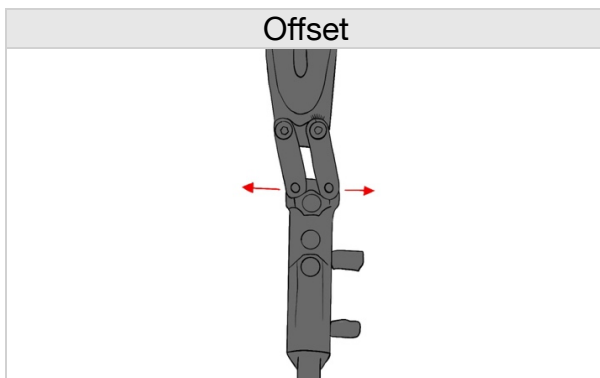

Trigger
